Customer Reviews

I highly recommend this book for anyone with curious children, or anyone of ANY age who is curious about the nature around them. Our family was given a previous edition of this book when our kids were small and we spent hours looking up odd-looking bugs we came across, the little striped snake we weren't sure of, what this or that wildflower was called, and what kind of tree is that in the neighbor's yard? Of course, this book doesn't contain EVERY variation of plant, bug, reptile, and mammal, but it has a great number of them - enough to satisfy most questions! One thing - the illustrations in this book are color drawings, very detailed but not photographs. So to determine the size of some things - like for example birds - you will have to refer to the descriptions and size measurements. We bought this copy of the revised edition as a Christmas gift for my daughter's college roommate after she saw and loved our book. It was a big hit!

very imformative. My grandchildren love to look at the birds and flowers and see if they can find them in our neighborhood/yard.

great read

There have been many plants and animals that I've wanted to identify - and now I can. It isn't perfect but will probably cover anything I'll ever need it for in the future as a rank amateur

My mother bought this book when I was a child in the mid 80s, and my siblings and I used it continually throughout our childhood and into our adult years to look up everything from birds to insects to "that strange thing the cat just ate". Recently I went to Barnes & Noble to look for a book similar to this, but there is nothing that compares to this book. Every book I found was for a particular class (birds, reptiles, etc.) or was even more specific (birds of North Georgia, etc.). I found no book that covers such a wide variety of species. Perhaps there are more in-depth books, but nothing beats this quick, easy reference. I'm pleased to know that they still have it in publication and that it is in the same format I grew up with. Because my mother's copy was so well loved and used, it's falling apart, so I'm buying a copy for my mother as well as one for myself. I know my children will enjoy it just as much as I did.

I love this book. This is the second copy that I have had. My father gave me this book originally.

This book is great. Good setup & more variety than any book I've found.

I purchased this book for my 2.5 yr old nephew as he loves birds, insects etc and always wants to know what kind they are. He uses this book as a reference and kind look up animals by himself. The book is very easy to use. He absolutely loves it!
